Code4Thought

code4thought

Code4Thought is a technology company with a unique purpose, to render technology transparent, for large-scale software systems and AI models. Our vision is to help people trust technology, so we support organizations in creating and using technology in a sustainable and responsible way either from a technical or a human point of view.

We pursue our vision through:
- Technology with a global reach
- International partnerships
- Growth via innovation and value creation
- Ability to build niche expertise
- People-first mentality

Our team consists of Software, Machine-Learning and DevOps Engineers and has the ability to provide high-end consulting services and conduct R&D activities, combined with commercial product development. We deeply believe in:
- Modesty: "underpromise, over-deliver" is our motto
- Openness: we are accessible and transparent
- Respect: the only way to treat everyone and everything
- Constant improvement and learning: it's all about being better than yesterday

We are a bit nerdy, but fun and we like to imagine the future and how we can make it better. We are growing in many directions, so we are constantly looking for people that are inspired by the same things and want to join.

AI advisory
We want to help society addressing the challenges imposed by automated decision making technology. For that reason, we are developing the PyThia technology that will ensure AI/ML systems are Fair, Accountable and Explainable.

Our team aims to advise companies worldwide, as to what are the best-practices for setting up the proper processes and infrastructure, that will ensure their AI is Responsible and can be Trusted.

Software Engineering Advisory
Furthermore, we analyze and evaluate large-scale enterprise software systems in collaboration with Software Improvement Group, enabling organizations to address IT-related flaws at the root and manage associated risks and costs. Our solutions aim to improve application health in all stages of the software lifecycle.
